

PiX Robo Module

Pacific NDT is excited to introduce the Robo Module 1.0 to mount our DR systems on circular objects. Robo Module can be mounted/dismounted using a single click & is rated to lift/hold up to 150 lbs of weight.

This Module is an optional accessory that connects with all generations of PiX Rhino Armor that encases the Pacific NDT DR systems.

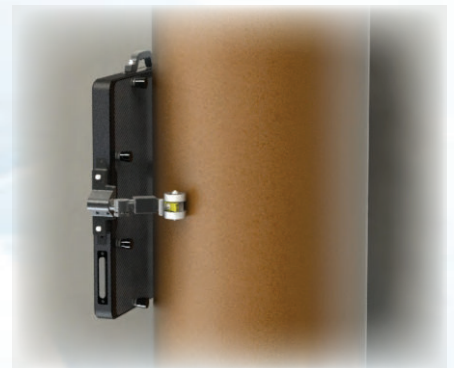

The need for this module arises from the challenges faced by end users in harsh & challenging environments while inspecting pipelines. Oftentimes, they have to work in a range of temperatures from freezing to hot. This mounting kit enhances the DR ease of use in portable pipeline integrity inspections.

Pix Rhino Armor 3.0 is an IP 68 rated system while our DR solutions themselves are IP 67 rated.

We provide all kinds of rugged mounting kits to meet the needs of end users working in the field.

We have mounting kits for all kinds of pipes (ferrous and non-ferrous) & flat objects.

Pacific NDT is a one stop shop for all of your state of the art portable imaging equipment. All our design, machining and integration is done in Seattle, WA with a keen eye towards the customer.
